TENANTS: please share this flood risk information with your landlord or apartment manager.

PROTECT WHAT MATTERS Think about what your family and property means to you. Have you done everything you can to protect them?

KNOW YOUR FLOOD RISK NOW! Your property is located in or near an area that has a high flood risk. It may be within or near either a Federal Emergency Management Agency (FEMA) regulated floodplain or a local regulatory floodplain. These are considered areas that have a 1% or greater chance of being flooded in any given year (a high risk of flooding) and are often referred to as the 100-year floodplain.

Major Streams Within Your Community
- Big Dry Creek
- Cottonwood Creek
- Goldsmith Gulch
- Greenwood Gulch
- Little Dry Creek

How close do you live to a floodplain? Search your address at http://udfcd.org/floodmap
Standard homeowners' insurance policies do not cover flood damages, especially if you are in or near a mapped floodplain area. Flood Insurance is recommended for everyone, but

- Obtain flood insurance.
- Keep trash and debris out of the drainage channels, so they can carry flood flows.
- Ensure that water flows away from your house.
- Report potential problems like blocked culverts, or people dumping debris in the channels.
- Construct barriers around window wells or other building openings to keep flood water from entering. Keep materials like sandbags, plywood, plastic sheeting, and lumber handy for emergency waterproofing. Floodproofing buildings can help reduce potential flood damages to structures and their contents. Structural changes should be designed by a professional engineer. A building permit may be required for this type of work.
- Ask your plumber about a valve to prevent sewage back-up.

After A Flood

- Cover broken windows and holes in the roof or walls to prevent further weather damage.
- Call your insurance agent. Proceed with immediate verification.
- Call the fire department to check for gas leaks, and ventilate the area. Before entering a building, check for structural damage, and keep record of repairs. Show these to the insurance appraiser for verification.
- You need to obtain a permit for repair if it’s more than just cleanup! Contact your local Floodplain Contact on the opposite side of this brochure.

- Stay informed—tune to a battery-powered radio, websites, or social media for advice on where to obtain medical care and assistance for such necessities as shelter, clothing, food, and counseling for stress.
- Do not visit disaster areas until authorized to do so.
- The structural, electrical, and plumbing systems, as well as gas lines and water wells should be professionally inspected for safety before re-entering your home.
- Before entering a building, check for structural damage and be alert for gas leaks, turn off outside gas lines to your meter, use a flashlight (no open flames) to inspect for damage, turn off the gas, and ventilate the area.
- Stay away from downed power lines and electrical wires—electricity can travel through water. Look before you step—the ground and floors may be covered with hazardous debris, and floors and stairs can be covered with slippery mud.

WE BUILD PROJECTS THAT PROTECT YOU

Benefits of the Floodplain
During flood events, urban stream corridors function as conveyance systems for storm runoff. There is a universal benefit to preserving the natural floodplain functions. Floodplains allow water to spread over a large area reducing the speed and volume of floodwater downstream.

Quality Counts
Help keep our lakes and streams clean: properly dispose of motor oil, pick up pet waste, use car washes instead of washing at home, and follow directions when using fertilizers, pesticides, and weed control chemicals.

PROTECT PEOPLE FROM FLOOD HAZARD

Before A Flood

- Plan evacuation routes to move to higher ground, and evacuate immediately, if necessary.
- Have photocopies of important documents and valuable papers away from your house (safe deposit box).
- Be prepared to move your valuables to a higher location, if possible.

During A Flood

- During heavy rainfall, stay alert for sirens and possible flood warnings (TV, radio, websites, and social media).
- If you are caught in the house by floodwater, move to a higher floor or the roof. Take warm clothing, a flashlight, your cell phone, and portable radio. Wait for help.
- Avoid contact with floodwater—it is contaminated and potentially hazardous.
- Do not drive through flooded areas—most flood deaths occur in cars.
- Do not drive around road barriers—the road or bridge may be washed out.
- Do not walk through flowing water—6 inches of moving water can knock you off your feet.
